The earliest AutoCAD versions were available for the Apple II, IBM-PC and Commodore-PC (and clones), and included early vector graphics, and drawing tools, including: Pencil tool Line tool Circle tool Rectangle tool Ellipse tool Polygon tool Traverse tool Draw rectangles Draw ellipses Draw polygons Draw arcs Draw circles Draw lines Draw B-splines 3D modeling, including wireframe, solid modeling and texture mapping 3D modeling, including insert, draft and dissolve There is also a version of AutoCAD which can be viewed on screen or printed to a LaserJet printer. AutoCAD LT (formerly AutoCAD R20) is a basic, free version of AutoCAD. History AutoCAD LT is a time-limited "Basic Edition" of AutoCAD, available free of charge. It was first released in 1994 as AutoCAD R20. Possible physical limitations with AutoCAD LT include: Up to 10-bit, 256 color graphics display Small file sizes Limited number of features AutoCAD LT is now deprecated in favor of AutoCAD Classic, which allows use of a full 32-bit color display (versus a 8-bit display available with the first releases of AutoCAD LT). AutoCAD Classic is the earlier program, and was previously known as AutoCAD R14. Introduction and release dates The first CAD software application for personal computers, used by architects and engineers, was MicroStation, released in 1975, but did not contain a CAD component until 1983. The first version of AutoCAD, released in December 1982, was a desktop app for Apple II microcomputers with an internal graphics controller. A version for the IBM-PC was released in January 1983, and the first Macintosh version of AutoCAD was released in July 1983. Version 1.0 (a desktop app for the Apple II) was released in January 1984. A version for the Commodore-PC (PET) was released in September 1984. A 32-bit version of AutoCAD, AutoCAD LT, was released for the Apple II, IBM-PC and Commodore-PC. It was first released in 1994 as AutoCAD R20

### What's New in the AutoCAD?

Drawing entities: Geometric entities, such as a two-dimensional line, a circle, or a text box, can be modified with new direct-edit tools. You can edit the object's shape, add additional properties, and set the object's tool properties. (video: 1:54 min.) Database management and collaboration: Check out the new tab for working with database files. Create, view, and work with table data. Automatically create tables from table data in any CAD or database file. Parameter query: Find out how to more quickly run queries that include complex mathematical expressions. Table manager: Save a spreadsheet into a table. Use tables to increase efficiency when working with a database. Web design: Use the website creation wizard to create web pages. Add navigation, style, and other web design details using wizards. (video: 3:24 min.) Vector plotter and display: Save time by using the new vector plotting tool, now called Layout. Set up your plot with the new design windows. Drag and drop directly from the design window onto your drawing canvas. Diagramming:

Insert and draw diagram elements. Click and drag to quickly add objects, shapes, and groups to your drawing. Change the placement of objects and groups with slide and scroll bars, even when the objects are grouped. Scripting: Automatically generate scripts to do repetitive tasks, such as exporting drawings to a CAD format. Dynamic Input: Use the new dynamic Input commands to let your drawings accept input from other programs or applications. Graphical user interface: Relax and enjoy the new UI. Easily move and resize windows and toolbars to match your screen resolution and device orientation. Display the CAD shell across multiple monitors. Real-time optical sensing of unlabeled cancer cells in flow-based microfluidic devices. We report on a newly developed highly sensitive flow cytometry approach for real-time optical sensing of unlabeled cancer cells in microfluidic devices. By employing a hydrodynamic trap system in combination with the two-photon excitation fluorescence (TPEF) technique, the sensing analysis is achieved in a few seconds. The cancer cells are entrapped in the flowing microfluidic channel in the same fashion as red blood cells. We
